ABSTRACT

The Airport Transport Research Society (ATRS) Databases are created and maintained by the Airport Transport Research Society, headquartered at College of Business, Embry-Riddle Aeronautical University. Airport performance data is the most comprehensive data for systematic analysis of airports' current and past performance, and covers 200+ airports in the following geographic regions:

- 1) Asia Pacific
- 2) Europe
- 3) North America

The database currently consists of data from financial year (FY) 2002 to 2018. Each file is organized by alphabetical order according to the airport code. Please refer to Appendix A for a list of the airports codes used.

In each of the region's databases, the following files are included:

- 1) Airport Information File
- 2) Aeronautical Revenue
- 3) Non-Aeronautical Revenue
- 4) Operating Expense
- 5) Balance Sheet
- 6) Traffic

For the Asia Pacific and Europe files, the files that include financial data have been conveniently converted to USD figures under the following files:

- 7) Aeronautical Revenue USD
- 8) Non-Aeronautical Revenue USD
- 9) Operating Expense USD
- 10) Balance Sheet USD

Subscription is based on a region-by-region basis. Annual updates will be available around August of each year, for an additional fee. Please note that there is 2 years lag in our latest financial data. For instance, in August 2012, the update is available for FY2010 data.

The data included are collected mainly from annual reports published by individual airport and airport groups, direct request information from the airports, the Federal Aviation Administration (FAA), and the respective airport websites.

ATRS would like to thank the ATRS task force members, networking committee members and all parties who support ATRS in various ways including render their help to obtain the valuable data for us.

The data compiled into the ATRS Databases are as complete and accurate as to our best understanding. Please be informed that the data elements outlined in this manual may not be available for some airports, please check with us for more details. Should there be any discrepancies in the data, kindly contact us. We accept no liability for the accuracy of the database information and data sale is considered final and non-refundable upon delivery of the data file.

FILE STRUCTURE

INTRODUCTION

This section contains the file structures of the 6 primary files included in each region’s database.

As there are 3 databases in total, one for each region, the naming convention of using a 2-letter code to distinguish between the different region’s files has been used. This code will precede the dataset name given to the file. For example, the Airport Information File in the Asia Pacific database would have the dataset name “APAirportInfo.”

<u>Region</u>	<u>Region Code</u>
Asia Pacific	AP
Europe	EU
North America	NA

The 6 primary files, which are included in all 3 databases, include the following:

<u>File Name</u>	<u>Dataset Name</u>
Airport Information File	_ _ AirportInfo
Aeronautical Revenue File	_ _ AeroRev
Non-Aeronautical Revenue File	_ _ NonAeroRev
Operating Expense File	_ _ OpExpense
Balance Sheet File	_ _ BalanceSheet
Traffic File	_ _ Traffic

The additional 4 files, which pertain only to the Asia Pacific and Europe databases, have the same file structure as the above file. The only difference is in the data, where the figures are reported under the U.S. Dollar.

<u>File Name</u>	<u>Dataset Name</u>
Aeronautical Revenue USD File	_ _ AeroRevUSD
Non-Aeronautical Revenue USD File	_ _ NonAeroRevUSD
Operating Expense USD File	_ _ OpExpenseUSD
Balance Sheet USD File	_ _ BalanceSheetUSD

Primary file contains data elements. For example, Airport Information File contains data elements of # of Runways, Terminal Size and etc. As the data are collected throughout the years, in order to distinguish between the years, the last 2 digits of the year are included at the end of each data element’s field name.

AIRPORT INFORMATION FILE

This file contains the general information of an airport. Description of the Airport Codes can be found in Appendix A. Detailed information on the airports can be found in Appendix D.

For each of the numerical data elements, two digits will be added at the end of the field name to indicate the year the data represents. For example, #Runways02 represents the ‘number of runways’ for 2002.

Dataset Name: __ AirportInfo
